CLD 6000 Contemporary Problem Analysis

Assessment 001 (100%)

Due date: 31/01/2024

Assessment Brief

You will work on a problem involving a real issue faced by employers. Your task is to gather requirements, do the analysis of the problem and provide analysis and design, as well as a research question to be evaluated. Implementation will be provided according to the design. The implementation will be tested and evaluated towards the research question. This critical analysis will result in conclusions regarding the problem and the analysis, design, and implementation followed. During this process you will be creating a portfolio of documents, diagrams, experiments, and other deliverables which will be used as part of your project's portfolio along with a final report of 3000 words describing the whole process and coming to useful conclusions.

Roadmap

1. Select a **topic** on the problem to be investigated and write an initial proposal. Cooperate with your instructor in order to verify that the topic is appropriate.
2. Define the **research question** and the research to be undertaken in order to support the project with solid previous knowledge. Also, define the questions to be critically evaluated and answered by the research in order to take important decisions for the project.
3. **Investigate** the problem, using previous research results, and **design** solution.
4. Present you findings and your **proposal**, explaining decisions taken and proposing the appropriate experiments and implementation.
5. **Implement** experiments and solutions in order to evaluate your proposals.
6. **Test and evaluate** your experiments and solutions towards the initial research and **critically respond** to the research question(s) set.
7. **Discuss** your progress in class and keep a log file with your weekly activities. Use version control for your log file to provide evidence that progress was recorded every week.
8. **Present** your solution.

Deliverables

1. Project proposal.
2. Design documents and artifacts for the proposed solution.
3. GitHub (or equivalent) repository with the source code of your experiments.
4. A report of 3.000 words with the evaluation of the implementation, the critical responses to the research question(s), and the final conclusions.
5. A log file describing your weekly activities and progress.

Mark Breakdown

Proposal	10
Design Documents and artifacts	10
Presentations (proposal / solution)	10
Experiments and Solution Implementation	30
Report	20
Log file	20

Learning Outcomes Assessed:

LO1: Critically evaluate appropriate sources of information for the production of experiments or solutions.

LO2: Critically investigate the problem in order to develop solutions.

LO3: Explain technical concepts to others both orally and in writing.

LO4: Critically analyse and observe the integrity and appropriateness of techniques and technologies.

LO5: Apply concepts, knowledge and/or analytical skills developed in your course to some element of the whole situation or experience.

Use of Generative Artificial Intelligence (GAI) Applications in this Assessment

AI Status	Application	Notes
Category C	GAI is an integral part of the assessment and should be used.	Grammar and/or spell checkers may be used to correct individual words and sentences. Your skills in using and evaluating GAI generated content is part of the assessment task in question. GAI generated content should be clearly identified and acknowledged.

		Any GAI generated content which is presented as your own original work and is not acknowledged will be assessed for academic misconduct.

References and citation

Written work should be referenced using the standard University of Bolton referencing style (Harvard Referencing Style)– see:
https://www.bolton.ac.uk/library/Study-Skills/Referencing/Home.aspx

Level HE6 - It is expected that the Reference List will contain between fifteen to twenty sources. As a MINIMUM the Reference List should include three refereed academic journals and five academic books.

Declaration: At the end of the assessment you should also include a declaration of any software tools including Generative AI (GAI) applications that you used in developing and completing the assessment.

Assessment Criteria for the Report

Relevance 15%
Knowledge 20%
Argument/Analysis 20%
Structure 10 %
Presentation 15%
Written English 10%
Research/Referencing 10%

(Please note that the General Assessment Criteria will also apply. Please see section 16 of module guide)

Successful submission:

(1) Students submit their report/essay on Turnitin
(2) if the Similarity report score is acceptable then the report is submitted also on the NYC e-learning platform along with the "Digital Receipt" from Turnitin, otherwise the student has to address any issues and resubmit on ***Turnitin*** *until the due date.*
(3) Implementation code is uploaded on GitHub.
